Solving Computer Problems

Made by: Amir, 8H

What may cause computer problems?

- Not regularly cleaning your computer (Causing dust and dirt)
- Hardware failure
- Overheating
- Outdated operating systems
- Viruses/malware

Ways to prevent these problems safely:

- Switch off power points at the wall before connecting/disconnecting a main electricity cable.

- Do NOT open the case of your computer or any other device

- Never use force when connecting/disconnecting a cable or component.

- Make sure all cables are disconnected before attempting to move a device (eg: printer)

- Do NOT lift heavy equipment on your own.

- If in doubt, stop and ask for help.

-
