

## Electrolysis

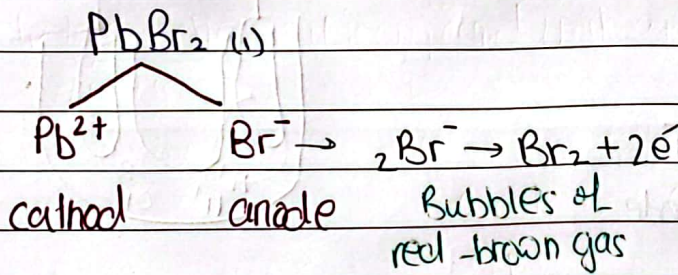

- Electrolysis for Molten electrolyte using Inert rods (graphite).

→ Electrolyte: used up  
 →  $\text{NaCl} \xrightarrow{\text{electricity}} \text{Na} + \text{Cl}_2$

## Molten lead (II) Bromide

$\text{Pb}^{2+} + 2\text{e}^- \rightarrow \text{Pb}$   
 Deposit of metal

\* Bulb lights on (another observation).

\* Electrolyte: used up.
