What did you learn?

When you complete this challenge, take a moment to reflect over what you have learnt with the table below.

Skill	I get it!	I am starting to get it!	I need to review this.
Communication and collaboration: I can discuss plans and strategies with my teammates.	We understood what we had to do and worked perfectly. The day we started working, there was an event in a game is abdulrahman left to play, and me, bashar, and rashed continued. The day after, I called them and they did not answer, except for rashed, so we continued and submitted it.		
Research: I can explain different research methods.	Yes, I can explain different research methods, we made a survey, and asked people who smoke questions about their smoking addiction		
Research: I understand the benefits and drawbacks of different research methods.	Yes, I understand. There are some people that may understand videos better than presentations, audios or surveys and vice-versa.		
Evaluation: I understand what cross-checking data means.	Yes, I understand, it is double checking the info we find on the internet or on books to make sure that it is true/false		
Evaluation: I understand what fake news is.	Yes, I understand what fake news is, some people on the internet post fake news for unknown reasons, thats why we should double-check the info that we recieve from the internet		
Evaluation: I understand why I need to double-check data I find.	Yes, because some people post fake info on the internet or on books, because either its their beliefs, or they want to give you false info.		
Communication: I try to communicate clearly, using the correct terminology when appropriate.	Yes, I know how to use terminology. I know alot of words that have similar meanings which makes me better in terminology, when I have to do it		
Communication: I know various ways to present information, such as presentations, murals, videos, etc.	Yes, I know various ways to present information, we made a survey.		
Research: I am beginning to explore social experiments as a research method.	Yes, Im beginning to explore social experiments as a research method, because other peoples thoughts and opinions are used, so no one feels biased
