

A close-up photograph of a silver spoon held over a white bowl. The spoon is filled with a variety of pills and capsules, including white tablets, yellow capsules, and brown capsules. The background is a soft, out-of-focus grey. A solid red rectangle is positioned in the top right corner of the image.

# Health Disease Meaning

## ▶ What is health disease?

- ▶ Health disease, any harmful deviation from the normal structural or functional state of an organism, generally associated with certain signs and symptoms and differing in nature from physical injury. A diseased organism commonly exhibits signs or symptoms indicative of its abnormal state. Thus, the normal condition of an organism must be understood in order to recognize the hallmarks of disease. Nevertheless, a sharp demarcation between disease and health is not always apparent.

# Alzheimer's Disease

Alzheimer's disease is a brain disorder that gets worse over time. It's characterized by changes in the brain that lead to deposits of certain proteins. Alzheimer's disease causes the brain to shrink and brain cells to eventually die. Alzheimer's disease is the most common cause of dementia — a gradual decline in memory, thinking, behavior and social skills. These changes affect a person's ability to function.

# Asthma

- ▶ Asthma is a chronic condition that affects the airways in the lungs. The airways are tubes that carry air in and out of your lungs. If you have asthma, the airways can become inflamed and narrowed at times. This makes it harder for air to flow out of your airways when you breathe out.

ASTHMA

# Bladder Cancer

- ▶ Bladder cancer starts when cells that make up the urinary bladder start to grow out of control. As more cancer cells develop, they can form a tumor and, with time, spread to other parts of the body. The bladder is a hollow organ in the lower pelvis. Its main job is to store urine. Urine is liquid waste made by the kidneys and then carried to the bladder through tubes called **ureters**. When you urinate, the muscles in the walls of the bladder contract, and urine is forced out of the bladder through a tube called the **urethra**.
