

$$9 \frac{2 \times 3}{8 \times 3} - 2 \frac{5 \times 4}{6 \times 4}$$

$$= 9 \frac{6}{24} - 2 \frac{20}{24}$$

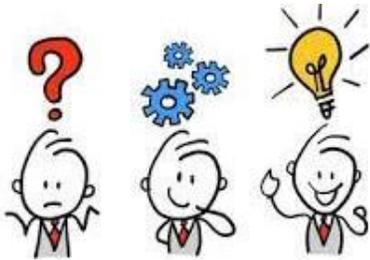

$$= 8 \frac{30}{24} - 2 \frac{20}{24}$$

$$= 6 \frac{10}{24} = 6 \frac{5}{12}$$

$$(4 + \frac{5}{9}) - 2 \frac{1}{6} =$$

$$4 \frac{5 \times 2}{9 \times 2} - 2 \frac{1 \times 3}{6 \times 3} = 4 \frac{10}{18} - 2 \frac{3}{18}$$

$$= 2 \frac{7}{18}$$

السؤال الثالث:

أجد ناتج مايلي بأبسط صورة :

$$\frac{1 \times 4}{6 \times 4} + 5 \frac{2 \times 6}{4 \times 6} + 2 \frac{1 \times 3}{8 \times 3} =$$

$$= \frac{4}{24} + 5 \frac{12}{24} + 2 \frac{3}{24}$$

$$= 7 \frac{19}{24}$$

انتهت الاسئلة
بالتوفيق
