180	(1)	(a) 0.50	(b) 0.60	(c) 0.26	(d) 0.12	(e) 0.09	(f) 0.30	
	(2)	(a) 0.46	(b) 0.05	(c) 3.03	(d) 16.09	(e) 108.47	(f) 10.02	(g) 300.08

200

(1) (a)  $\frac{30}{100} = \text{ } 30\%$

(b)  $\frac{6}{100} = \text{ } 6\%$

(c)  $\frac{14}{100} = \text{ } 14\%$

201

(2) (a) 3% of \$200 =  $\frac{3}{100} \times \$ \text{ } 200$   
 $= \$ \text{ } 6$

(b) 11% of 220 m =  $\frac{11}{100} \times \text{ } 220 \text{ m}$   
 $\approx \text{ } 24.2 \text{ m}$

(c) 20% of 70 kg =  $\frac{20}{100} \times \text{ } 70 \text{ kg}$   
 $= \text{ } 14 \text{ kg}$

(d) 50% of 180 ml =  $\frac{50}{100} \times \text{ } 180 \text{ ml}$   
 $= \text{ } 90 \text{ ml}$

(e) 25% of 180 ml =  $\frac{25}{100} \times \text{ } 180 \text{ ml}$   
 $= \text{ } 45 \text{ ml}$

202

- (3) (a) Convert the percentage to a fraction.

$$10\% = \frac{10}{100} = \frac{1}{10}$$

Multiply the fraction by the cost of the computer.

$$\frac{1}{10} \times \$470 = \frac{470}{10} \\ = \$47$$

So, \$47 is saved by buying the computer during the sale.

- (b) We subtract the saving from the original price.

$$\$470 - \$47 = \$423$$

The computer costs \$423 during the sale.
